

Bug reports list

ID: 001 Summary: "Enter Content" button is misaligned in the URL section, affecting user interaction.

ID: 002 Summary: Twitter URL field accepts non-URL formatted strings without validation

ID: 003 Summary: Background color change option in the Email section does not apply

ID: 004 Summary: QR code shape does not change to round in the Text section

ID: 005 Summary: "Pattern Special Diamond" option in URL section of Customize Design does not work

ID: 006 Summary: Search functionality in Location section fails and causes an error.

ID: 007 Summary: Page refresh redirects to URL section regardless of the current section.

ID: 001

Summary: "Enter Content" button is misaligned in the URL section, affecting user interaction.

Description: The "Enter Content" button in the URL section of the page is not correctly aligned, which makes it hard for users to find and click. It appears out of place, disrupting the overall layout of the page.

Steps to reproduce:

1. Go to the following URL: <https://orderific.com/qrcode-bug#nav-location>.
2. Scroll to the URL section.
3. Observe the position of the "Enter Content" button.

Expected result: The "Enter Content" button should be properly aligned and placed within the URL section to ensure good visibility and usability.

Actual result: The button is misaligned and positioned awkwardly, making it difficult to interact with.

Severity: Minor

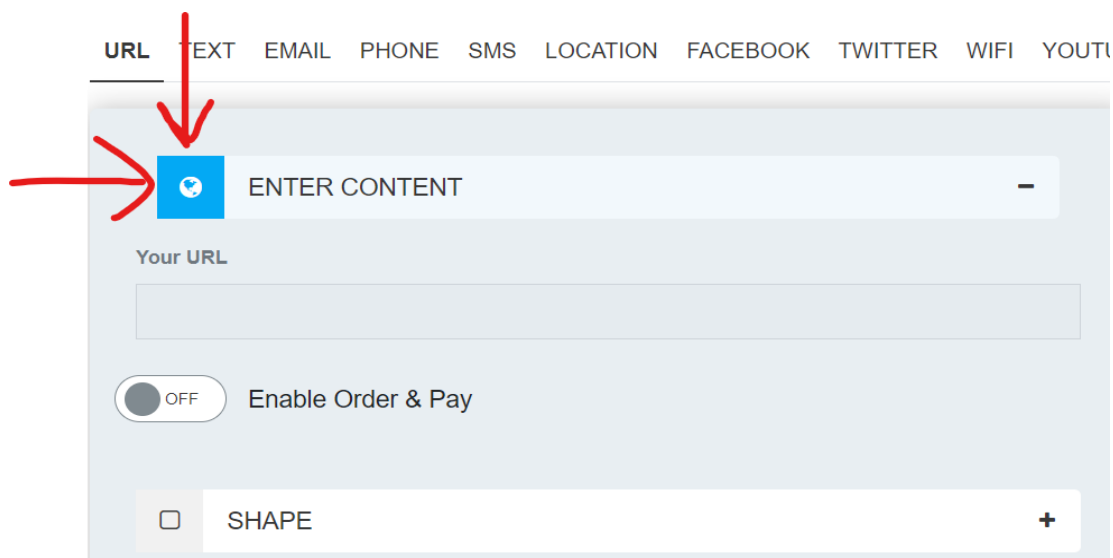

Priority: Medium

Environment:

- OS: Windows 10
- Browser: Google Chrome 116.0.5845.97, Firefox 117.0
- App Version: 1.3.2

ID: 002

Summary: Twitter URL field accepts non-URL formatted strings without validation

Description: In the Twitter section, when entering a string that does not conform to a URL format into the Twitter URL field, the system accepts it without validation. This can lead to incorrect or malformed URLs being saved and used.

Steps to reproduce:

1. Go to the following URL: <https://orderific.com/qrcode-bug#nav-location>.
2. Navigate to the Twitter section.
3. Click on the Twitter URL field.
4. Enter a string that is not in URL format (e.g., "not-a-valid-url").
5. Observe that the string is accepted and saved without any validation errors.

Expected result: The Twitter URL field should validate the input and only accept strings that are in a valid URL format. Invalid URLs should trigger an error message or prompt for correction.

Actual result: The field accepts any input without validation, allowing non-URL formatted strings to be entered.

Severity: Major

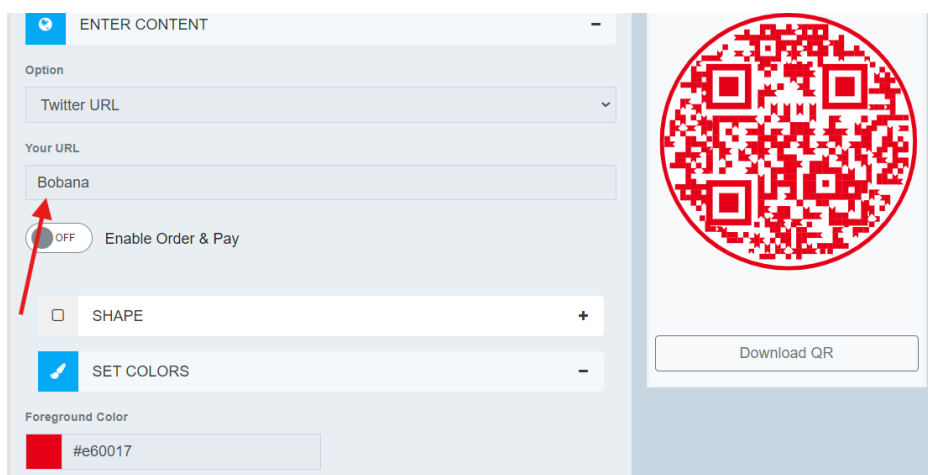

Priority: High

Environment:

- OS: Windows 10
- Browser: Google Chrome 116.0.5845.97, Firefox 117.0
- App Version: 1.3.2

Summary: Background color change option in the Email section does not apply

Description: In the Email section, selecting the option to change the background to black does not apply the new background color. The background remains unchanged regardless of the selection made.

Steps to reproduce:

1. Go to the following URL: <https://orderific.com/qrcode-bug#nav-location>.
2. Navigate to the Email section.
3. Select the option to change the background color to black.
4. Observe that the background color does not change.

Expected result: The background color should change to black when the option is selected.

Actual result: The background color remains unchanged despite selecting the black color option.

Severity: Major

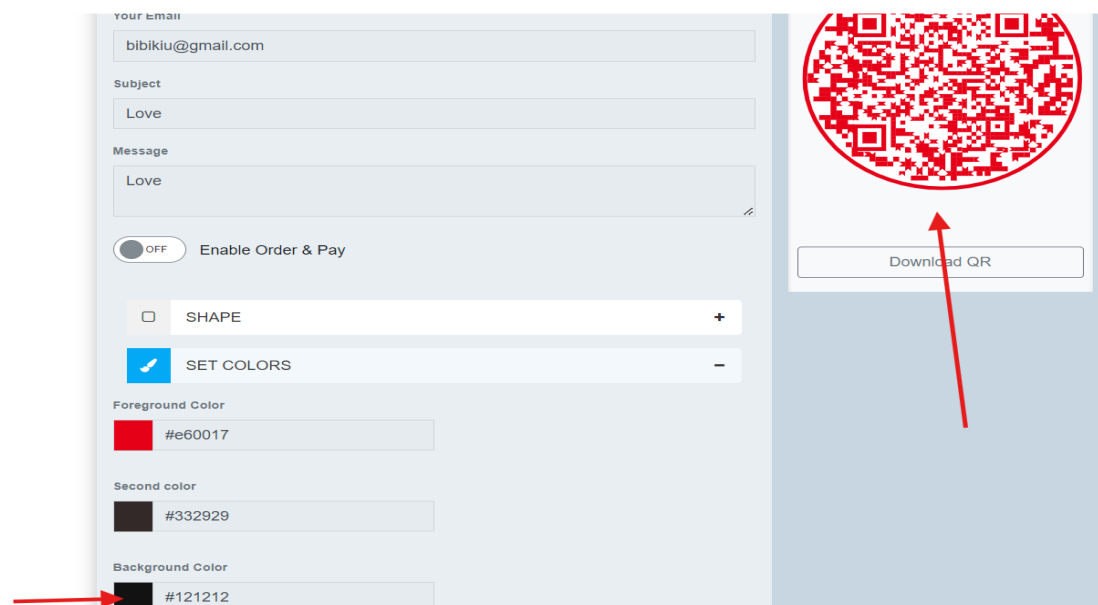

Priority: Medium

Environment:

- OS: Windows 10
- Browser: Google Chrome 116.0.5845.97, Firefox 117.0
- App Version: 1.3.2

Attachments:

- Screenshot: Showing the Email section with the black background color option selected but not applied

Summary: QR code shape does not change to round in the Text section

Description: In the Text section, selecting the option to change the QR code shape to a round (circular) format does not apply the new shape. The QR code remains in its default shape despite the selection.

Steps to reproduce:

1. Go to the following URL: <https://orderific.com/qrcode-bug#nav-location>.
2. Navigate to the Text section.
3. Select the option to change the QR code shape to round.
4. Observe that the QR code shape does not change and remains in its default format.

Expected result: The QR code shape should change to round (circular) when the option is selected.

Actual result: The QR code shape remains unchanged and does not switch to the round format.

Severity: Major

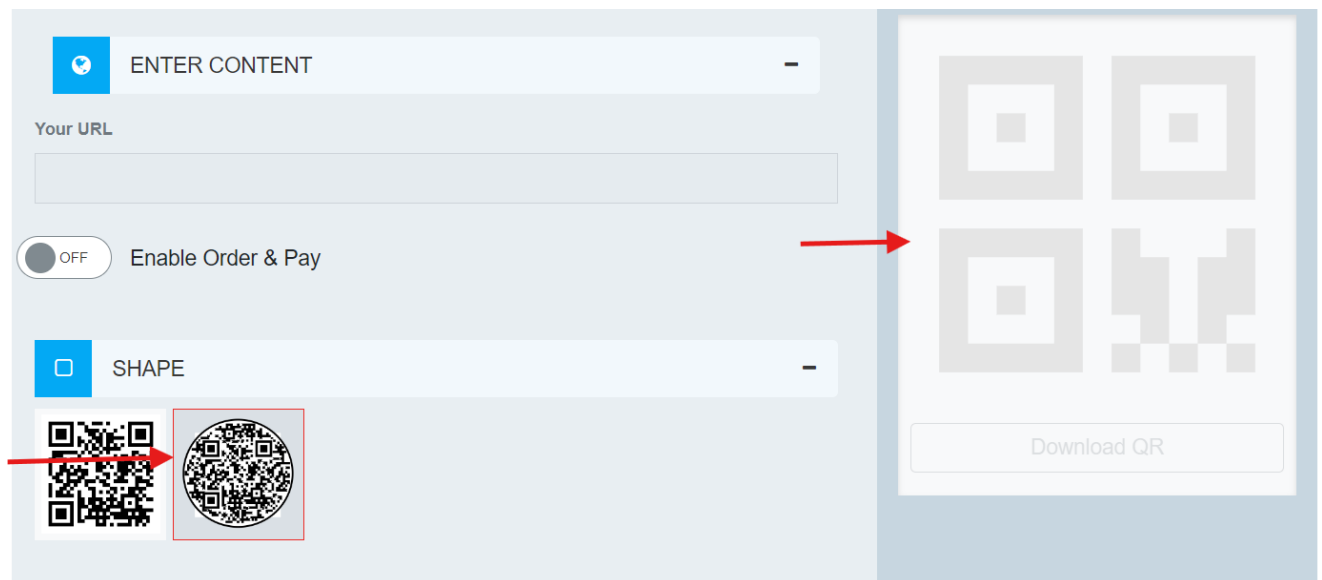

Priority: Medium

Environment:

- OS: Windows 10
- Browser: Google Chrome 116.0.5845.97, Firefox 117.0
- App Version: 1.3.2

Attachments:

Summary: "Pattern Special Diamond" option in URL section of Customize Design does not work

Description: In the Customize Design section, selecting the "Pattern Special Diamond" option for the URL does not apply the pattern. The pattern remains unchanged regardless of the selection made.

Steps to reproduce:

1. Go to the following URL: <https://orderific.com/qr-code-bug#nav-location>.
2. Navigate to the Customize Design section.
3. Go to the URL section.
4. Select the "Pattern Special Diamond" option.
5. Observe that the pattern does not apply and remains unchanged.

Expected result: The URL section should display the QR code with the "Pattern Special Diamond" pattern applied when the option is selected.

Actual result: The pattern does not apply, and the URL section remains with the default pattern.

Severity: Major

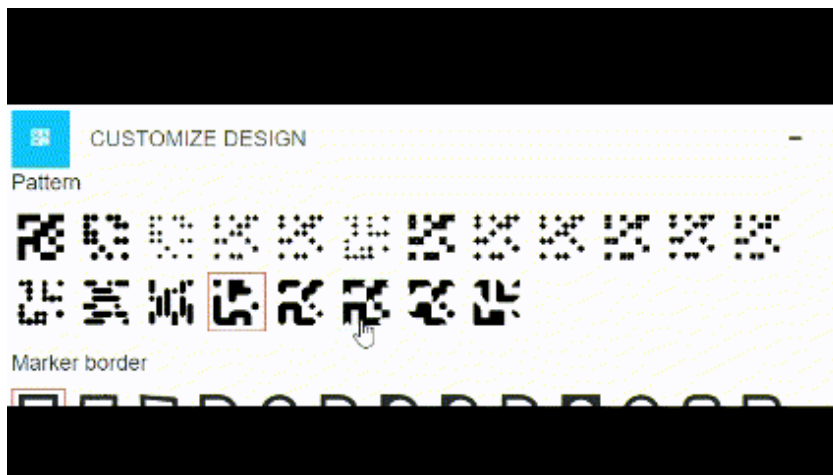

Priority: Medium

Environment:

- OS: Windows 10
- Browser: Google Chrome 116.0.5845.97, Firefox 117.0
- App Version: 1.3.2

Summary: Search functionality in Location section fails and causes an error.

Description: In the Location section, when attempting to search for a location, the input field freezes and an error message appears as soon as typing begins.

Steps to Reproduce:

1. Go to the following URL: <https://orderific.com/qrcode-bug#nav-location>.
2. Navigate to the Location section.
3. Click on the search field to activate it.
4. Begin typing the name of a location.
5. Observe that the input field freezes and an error message appears.

Expected Result: The search field should accept input and provide search results or suggestions without freezing or displaying an error.

Actual Result: The input field freezes and an error message is displayed immediately upon typing.

Severity: Critical

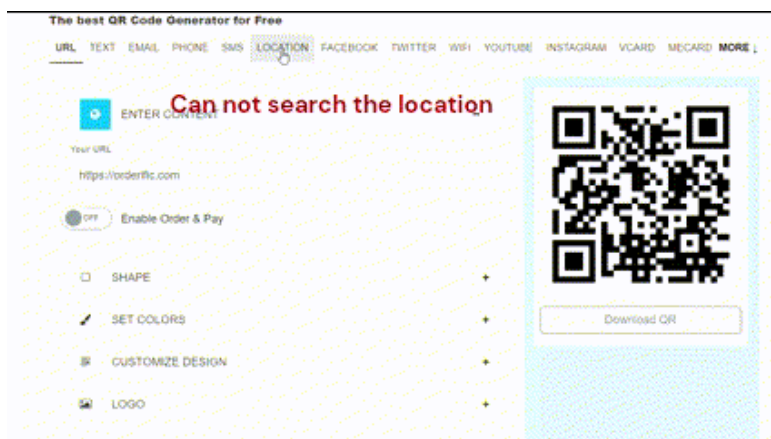

Priority: High

Environment:

- OS: Windows 10
- Browser: Google Chrome 116.0.5845.97, Firefox 117.0
- App Version: 1.3.2

Attachments:

ID: 007

Summary: Page refresh redirects to URL section regardless of the current section.

Description: When refreshing the page, the user is redirected to the URL section of the page, regardless of which section they were in before the refresh.

Steps to Reproduce:

1. Navigate to any section of the page on <https://orderific.com/qrcode-bug#nav-location>.
2. Perform a page refresh (e.g., by pressing F5 or clicking the refresh button in the browser).
3. Observe that after the refresh, the page redirects to the URL section.

Expected Result: The page should retain the user's position and remain in the section where they were before the refresh.

Actual Result: The page redirects to the URL section after a refresh, regardless of the section the user was in.

Severity: Major

Priority: High

Environment:

- OS: Windows 10
- Browser: Google Chrome 116.0.5845.97, Firefox 117.0
- App Version: 1.3.2
